How many customers have at least one order with status 'paid' and at least one support_tickets entry with status 'open'? Return an integer.", "7. Which customer_id values have at least one pending order that contains a nested contents entry with product_id 'P04', and the invoice matched by that order_id has status either 'sent' or 'overdue'? Return a sorted Python list of unique strings.", "8. Among customers where segment is 'startup', which order_id is the pending order with the greatest amount? If there is a tie, return the lexicographically smallest order_id. Return a string.", "9. Among customers who have at least one support_tickets entry with category 'integration' and status 'open', which customer_id has the earliest signup_date? If there is a tie, return the lexicographically smallest customer_id. Return a string.", "10. What is the grouped sum of order.amount by customer.segment, using only orders where status is 'paid'? Return a Python dict mapping segment strings to integers, sorted by key."]

structured_queries_questions = ["1. For every order where status is 'cancelled', return a Python list of dicts with exactly these keys: 'order_id', 'customer_id', 'amount'. Sort by amount ascending, then order_id ascending.", "2. For every customer where city is 'Stockholm', return a Python list of dicts with exactly these keys: 'customer_id', 'name', 'segment'. Sort by customer_id ascending.", "3. For every support_tickets record where status is 'open' and priority is 'high', return a Python list of dicts with exactly these keys: 'ticket_id', 'customer_id', 'category'. Sort by ticket_id ascending.", "4. For every invoice where status is 'paid' and amount is at least 28000, return a Python list of dicts with exactly these keys: 'invoice_id', 'customer_id', 'amount'. Sort by amount ascending, then invoice_id ascending.", "5. For every order where status is 'pending' and fulfillment.warehouse_id is 'W03', return a Python list of dicts with exactly these keys: 'order_id', 'customer_id', 'warehouse_id'. Sort by order_id ascending.", "6. For every nested contents entry where

product_id is 'P07', return a Python list of dicts with exactly these keys: 'content_id', 'customer_id', 'order_id', 'quantity'. Sort by content_id ascending.", "7. For every customer with an empty support_tickets list, return a Python list of dicts with exactly these keys: 'customer_id', 'city', 'active'. Sort by customer_id ascending.", "8. For every shipment where carrier is 'Bring' and status is 'delivered', return a Python list of dicts with exactly these keys: 'shipment_id', 'customer_id', 'order_id'. Sort by shipment_id ascending.", "9. For every invoice where status is 'overdue', return a Python list of dicts with exactly these keys: 'invoice_id', 'customer_id', 'due_date'. Sort by due_date ascending, then invoice_id ascending.", "10. For every order that contains both product_id 'P01' and product_id 'P07' somewhere in its nested contents, return a Python list of dicts with exactly these keys: 'order_id', 'customer_id', 'status'. Sort by order_id ascending."]
